CANDIDATE'S DECLARATION

I, Manika Vashishtha, student of B.Tech Computer Science and Engineering at IILM University, Greater Noida, hereby declare that this internship report titled “Python Full Stack Development With Project Virtual Internship” is prepared as a record of the learning and practical work completed during the internship period of April to June 2026.

The report presents the knowledge and practical implementation gained during the internship, with special focus on web development using HTML, CSS and JavaScript. The project discussed in this report is “StudyMate – Student Study Planner”, a frontend web application created to help students organize subjects, tasks and study schedules.

I have prepared this report for academic submission and have presented the project work and learning outcomes to the best of my knowledge.

Name: Manika Vashishtha

Roll No.: 2410030772

Date: _____

Signature: _____

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to IILM University, Greater Noida, and the School of Computer Science and Engineering for providing me with the opportunity to undertake this internship and present my learning through a practical project.

I am thankful to EduSkills Academy for providing the Python Full Stack Development With Project Virtual Internship. The internship gave me an opportunity to strengthen my understanding of web development and to practice the implementation of HTML, CSS and JavaScript in a practical environment.

I would also like to thank my faculty members and everyone who supported and guided me during the learning and development process. Their encouragement helped me understand the concepts and apply them while developing the StudyMate project.

Finally, I am grateful for the opportunity to work on a project that helped me connect the concepts learned during the internship with a practical student-oriented web application.

Certificate of Virtual Internship

This is to certify that

Manika vashishtha

IILM University, Greater Noida

has successfully completed the 8-weeks

Python Full Stack Development With Project Virtual Internship

During April - June 2026

May this Internship learning propel you toward a bright and successful career.

PROJECT DESCRIPTION

4.1 Introduction

Web development is an important area of computer science that focuses on creating websites and web applications that are useful, interactive and accessible to users. During the internship, I learned and practiced the implementation of frontend web technologies, particularly HTML, CSS and JavaScript, using Visual Studio Code as the development environment.

As a practical application of these skills, I developed StudyMate – Student Study Planner. StudyMate is a simple browser-based student planner designed to help students organize their subjects, academic tasks and study sessions from one interface.

4.2 Organization Profile

EduSkills Academy provided the Python Full Stack Development With Project Virtual Internship in which the internship was completed. The internship was conducted virtually and had a duration of eight weeks during April–June 2026. The certificate provided for the internship records the completion of the virtual internship.

The internship experience was used to develop practical understanding of programming and web-development implementation. In this report, the project work is presented with emphasis on the frontend technologies practiced by the student.

4.3 Problem Statement

Students often manage their subjects, assignments and study timings using separate notes, applications or informal methods. This can make it difficult to keep academic information organized in one place. There is a need for a simple and easy-to-use interface where a student can add subjects, record tasks, mark tasks as completed and plan study sessions.

StudyMate addresses this problem by providing a single, simple web interface for basic student planning activities.

4.4 Project Objectives

The main objective of StudyMate is to develop a simple and user-friendly student study planner using fundamental frontend web-development technologies.

- To create a clear and simple interface for students.
- To allow users to add and manage subjects.
- To allow users to add academic tasks with deadlines.
- To provide an option to mark tasks as completed.
- To calculate and display task completion progress.
- To allow users to add and delete study schedule sessions.
- To practice HTML, CSS and JavaScript through a practical project.
- To understand basic DOM manipulation, arrays, functions and event handling in JavaScript.

4.5 Scope of the Project

The current version of StudyMate focuses on frontend functionality that can run directly in a web browser. The application includes four main areas: Home, Subjects, Tasks and Schedule.

The Subjects section allows a subject name and priority to be entered and displayed. The Tasks section allows a task and deadline to be added, completed or deleted, and displays a progress percentage. The Schedule section allows a subject and start/end time to be added and deleted.

The current beginner version does not use a backend database or user authentication. Data is held in JavaScript arrays while the page is running. Features such as persistent storage, advanced editing, charts, authentication and cloud synchronization can be considered as future enhancements.

4.6 Technologies and Tools Used

Technology/Tool	Purpose	Use in StudyMate
HTML	Structure of web pages	Creates sections, forms, buttons, inputs and lists.
CSS	Presentation and styling	Controls layout, colors, spacing, cards, forms and responsive design.
JavaScript	Interactivity and logic	Handles navigation, adding/deleting data, task completion and progress.
Visual Studio Code	Development environment	Used to create and edit the project files.
Web Browser	Execution and testing	Used to run and test the StudyMate application.

4.7 System Architecture

StudyMate follows a simple client-side architecture. The user interacts with the web page through a browser. HTML provides the structure, CSS provides the visual presentation, and JavaScript controls user interactions and updates the page.

User → Web Browser → HTML + CSS + JavaScript → DOM → Updated Interface

The project is organized into three main files: index.html for page structure, style.css for styling, and app.js for application logic. JavaScript communicates with HTML elements through the Document Object Model (DOM). User-entered subjects, tasks and schedule items are stored in JavaScript arrays during the current browser session.

4.8 Methodology

The project was developed using a simple step-by-step approach suitable for a beginner web-development project.

- Requirement identification – identified the basic needs of a student planner.
- Interface design – planned the Home, Subjects, Tasks and Schedule sections.
- HTML implementation – created the page structure, forms, buttons and lists.
- CSS implementation – added layout, colors, spacing, cards, forms and responsive behavior.
- JavaScript implementation – added navigation, data handling, task completion and progress calculation.
- Testing – tested the forms, navigation, subject management, task management, progress bar and schedule functions in the browser.
- Improvement – simplified the code so that the project remains understandable and maintainable for a beginner.

4.9 Expected Outcomes

- A functional and easy-to-use student study planner.
- Improved practical understanding of HTML, CSS and JavaScript.
- Better understanding of JavaScript variables, arrays, objects, functions and event listeners.
- Practical experience with DOM manipulation.

- Ability to create forms and respond to user actions.
- A foundation for adding advanced features such as local storage, editing, authentication and backend integration in future.

4.10 Certificates of Completion and Communication Mail Proof

The internship completion certificate is attached in Section 3 of this report.
